**Soybeans and  
Minor Oilseeds****Summary of 1998 Loan Program  
and Related Information****Statutory Background**

The 1996 Farm Bill requires that nonrecourse marketing assistance loans and loan deficiency payments be implemented for the 1996-2002 crops of soybeans and minor oilseeds. National average oilseed loan rates are set annually based on the following formula and conditions:

- for soybeans, 85 percent of the simple average price received by producers during the marketing years for the immediately preceding 5 crops, excluding the highest and lowest prices, but not less than \$4.92 per bushel nor more than \$5.26 per bushel, and
- for each of the minor oilseeds, 85 percent of the simple average price received by producers of sunflower seed during the marketing years for the immediately preceding 5 crops, excluding the highest and lowest prices, but not less than \$8.70 per hundredweight (cwt) nor more than \$9.30 per cwt.

With marketing loan provisions, producers may (under certain conditions) either: (1) repay a 9-month nonrecourse commodity loan at less than the loan rate plus accrued interest and other charges or (2) receive a loan deficiency payment (LDP) in lieu of obtaining a loan.

**Eligible Crops**

Soybeans and minor oilseeds (canola, flaxseed, mustard seed, safflower seed, sunflower seed, and rapeseed).

**Loan Rates**

The 1998-crop national average loan rates are \$5.26 per bushel for soybeans and \$9.30 per cwt for minor oilseeds.

Loan rates: (1) vary among counties and commodities, (2) are based on the county where stored, and (3) may be adjusted by the Commodity Credit Corporation (CCC) with premiums and discounts to reflect the quality factors of a given quantity placed under loan.

**Eligibility Requirements**

For crops to be eligible for a marketing assistance loan or an LDP, producers must:

- comply with applicable conservation and wetland protection requirements,
- report the planted acreage for the crop,
- have **beneficial interest** in the commodity on the date the loan or LDP is requested and, in the case of a loan, beneficial interest must be retained while the loan is outstanding, and

- ensure that the oilseed meets the CCC minimum grade and quality standards.

**Beneficial Interest**

A producer retains beneficial interest in the commodity if all of the following remain with the producer: (1) control of the commodity, (2) risk of loss, and (3) title to the commodity.

A producer is considered to have:

- **control** of the commodity if the producer retains the ability to make all decisions affecting the commodity, including movement, sale, and the request for a loan or LDP,
- **risk of loss** in the commodity if the producer is responsible for loss or damage to the commodity. If the commodity is insured, any indemnity must be payable to the producer, and
- **title** to the commodity if the producer has not sold or has not delivered the commodity or warehouse receipt to the buyer. Title may be considered to be transferred before the producer receives payment for the commodity.

Once beneficial interest in the commodity is lost, the commodity loses eligibility for a loan or an LDP

and remains ineligible even if the producer later regains beneficial interest.

For further information, see the Farm Program Fact Sheet on "Beneficial Interest Requirements For Loans and LDPs, Excluding Sugar and Tobacco" or contact a local FSA office.

### **Loan Settlements**

Loans mature on the last day of the ninth month following the month in which the loan is made.

Producers may settle their outstanding loan:

- during the 9-month loan period by repaying the loan, or
- upon maturity by forfeiting the commodity to the CCC.

### **Loan Repayment Rates**

The loan repayment rate is the **lower** of (1) the applicable county loan rate plus accrued interest and other charges (per bushel) or (2) the announced loan repayment rate for the respective commodity.

Announced loan repayment rates are established and available at each county FSA office based upon the previous day's market prices for soybeans (weekly market prices for minor oilseeds) at appropriate U.S. terminal markets, as determined by CCC, adjusted to reflect quality and location.

### **Marketing Loan Gains**

Producers realize a marketing loan gain if they repay their loans when the announced loan repayment rate is less than the loan principal.

The marketing loan gain rate equals the amount by which the applicable loan rate exceeds the announced loan repayment rate for the respective loan.

### **LDPs**

Producers who are eligible to obtain a loan, but who agree to forgo the loan, may obtain an LDP.

The LDP rate equals the amount by which the applicable county loan rate exceeds the announced loan repayment rate for the respective commodity.

The LDP equals the LDP rate times the quantity of oilseed for which the LDP is requested and is otherwise eligible to be placed under loan.

### **Final Loan/LDP Availability Dates**

Final loan/LDP availability dates are:

- May 31, 1999--Soybeans, Sunflower Seeds, Safflower, and Mustard Seed.
- March 31, 1999--Canola, Rapeseed, and Flaxseed.

Producers may either obtain a loan or receive LDPs on all or part of their production during the loan availability period.

### **Production Evidence**

Producers who repay a loan at less than the loan rate, plus accrued interest and other charges, or receive an LDP must provide production evidence acceptable to CCC, such as evidence of sales, warehouse receipts, load summaries or assembly sheets.

### **Payment Limitations**

The sum of LDPs and marketing loan gains for all commodities are subject to a \$75,000 per person payment limitation. This payment limitation is separate from the \$40,000 per person limitation for market transition payments.

### **Soybean Marketing Loan/LDP Examples**

#### **Under Various Price Scenarios —— (\$ per bushel) ——**

	Price Scenario		
	1	2	3
1) Loan rate	5.26	5.26	5.26
2) Loan rate plus accrued interest	5.35	5.35	5.35
3) Announced loan repayment rate	6.00	5.30	5.00
4) Loan repayment rate (lower of 2 or 3)	5.35	5.30	5.00
5) Marketing loan gain or LDP rate	0.00	0.00	0.26

\* Crop year: September-August

\*\* Estimate, as of June 1998

\*\*\* Forecast, as of June 1998

For statistics for 1943 through 1954, see Soybeans Commodity Fact Sheet dated March 1979.  
For statistics for 1955 through 1970, see Soybeans Commodity Fact Sheet dated August 1994.

Starting with the 1991 crop, the price support program includes marketing loan provisions.  
A 2-percent loan origination fee on the value of a loan was applied to 1991 through 1993 crops.
